

Fishing Project!

You will have four class periods to complete. This is due at the completion of the fishing unit, the day of the fishing quiz:

Research a type of fish (pick one from packet handed out in class)

Investigate the following information:

- Physical description and what is unique about species
- Where species are found
 - Type of water: freshwater, saltwater, lakes, rivers, ponds, oceans, etc.
 - Region: Florida, mid-west lakes, Canada, west coast, Kankakee river, etc.
- What time of year and climate are they caught most often
- What baits and fishing techniques work best to catch these fish
- Size limits and restrictions of catch and release/keeping that the department of natural resources creates to help grow population
- What equipment would you want to purchase if you were to walk into Bass Pro Shops in order to catch these fish- go onto website and find costs for these items.
- Pictures and videos of fish in action
- Any national or regional fishing tournaments for these types of fish
- Any other pertinent information or extras to help capture all the fascinating facts about your fish

Compile information and put into a Power point presentation. Include a colorful fun cover page, large font so entire class can see when watching from Multipurpose room, and include a Sources page at end with at least 3 web-sites/books used. Be prepared to present your findings and presentation to the class on a rain day! Have fun researching!

I know you will behave appropriately, but just a reminder to please be respectful of others in the media center- the staff and equipment/computers and your peers. If you are kicked out of media center, you will be sent to the ALC. Make sure you scan in in the media center BEFORE the bell- this is how you will be marked present for class. Thank you and good luck!
